Problem statement

Manual checking of insurance and corporate documents is slow, error-prone, and hard to scale.

Users struggle to find clear answers in lengthy policy documents.

This leads to delays, misunderstanding, and risks.

There's a need for an automated solution.

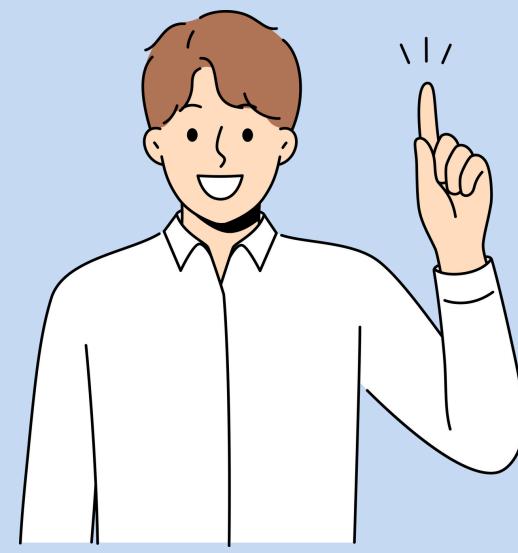

What if it doesn't get resolved???

If unresolved, manual checking of insurance and corporate documents will continue to cause delays, errors, and scalability issues.

Misunderstandings from complex policies will persist, increasing risks and inefficiencies, ultimately leading to higher costs, frustrated users, and potential legal or financial consequences for organizations.

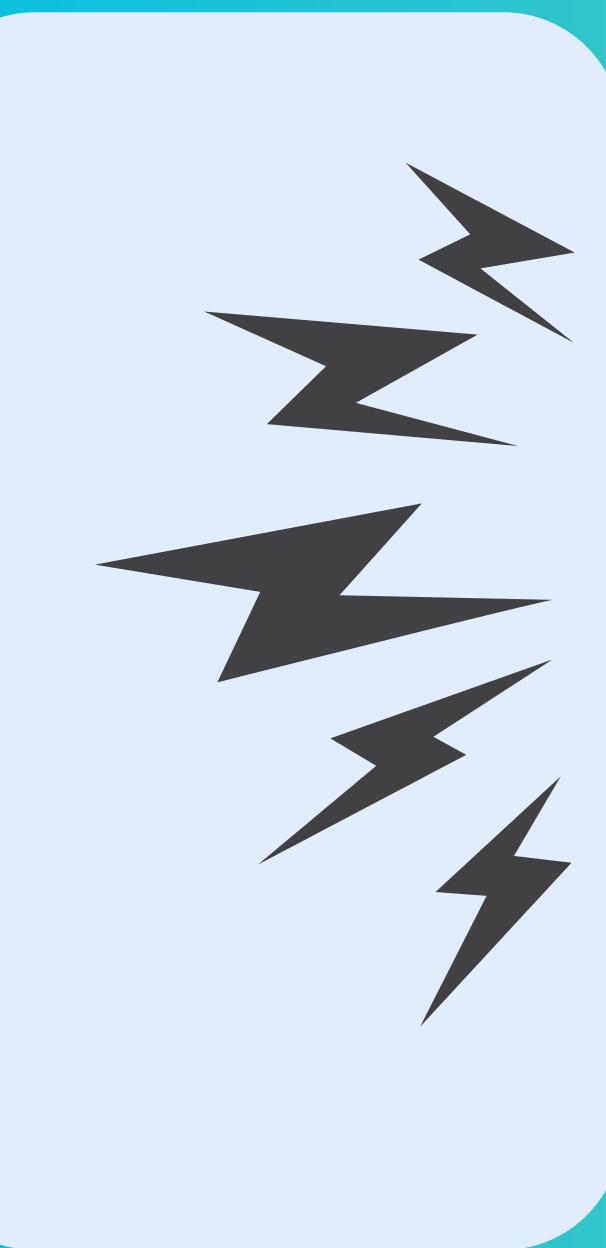

SOLUTION

Review insurance documents to identify and extract key compliance information.

Extract and display decisions, coverage amounts, and related policy clauses.

Understand user queries to find relevant details from insurance policies.

Provide answers in a structured format that follow regulatory compliance guidelines.

Impacts

Clear & Honest - Policies made easy to understand

Faster Decisions – Quicker claims, less waiting

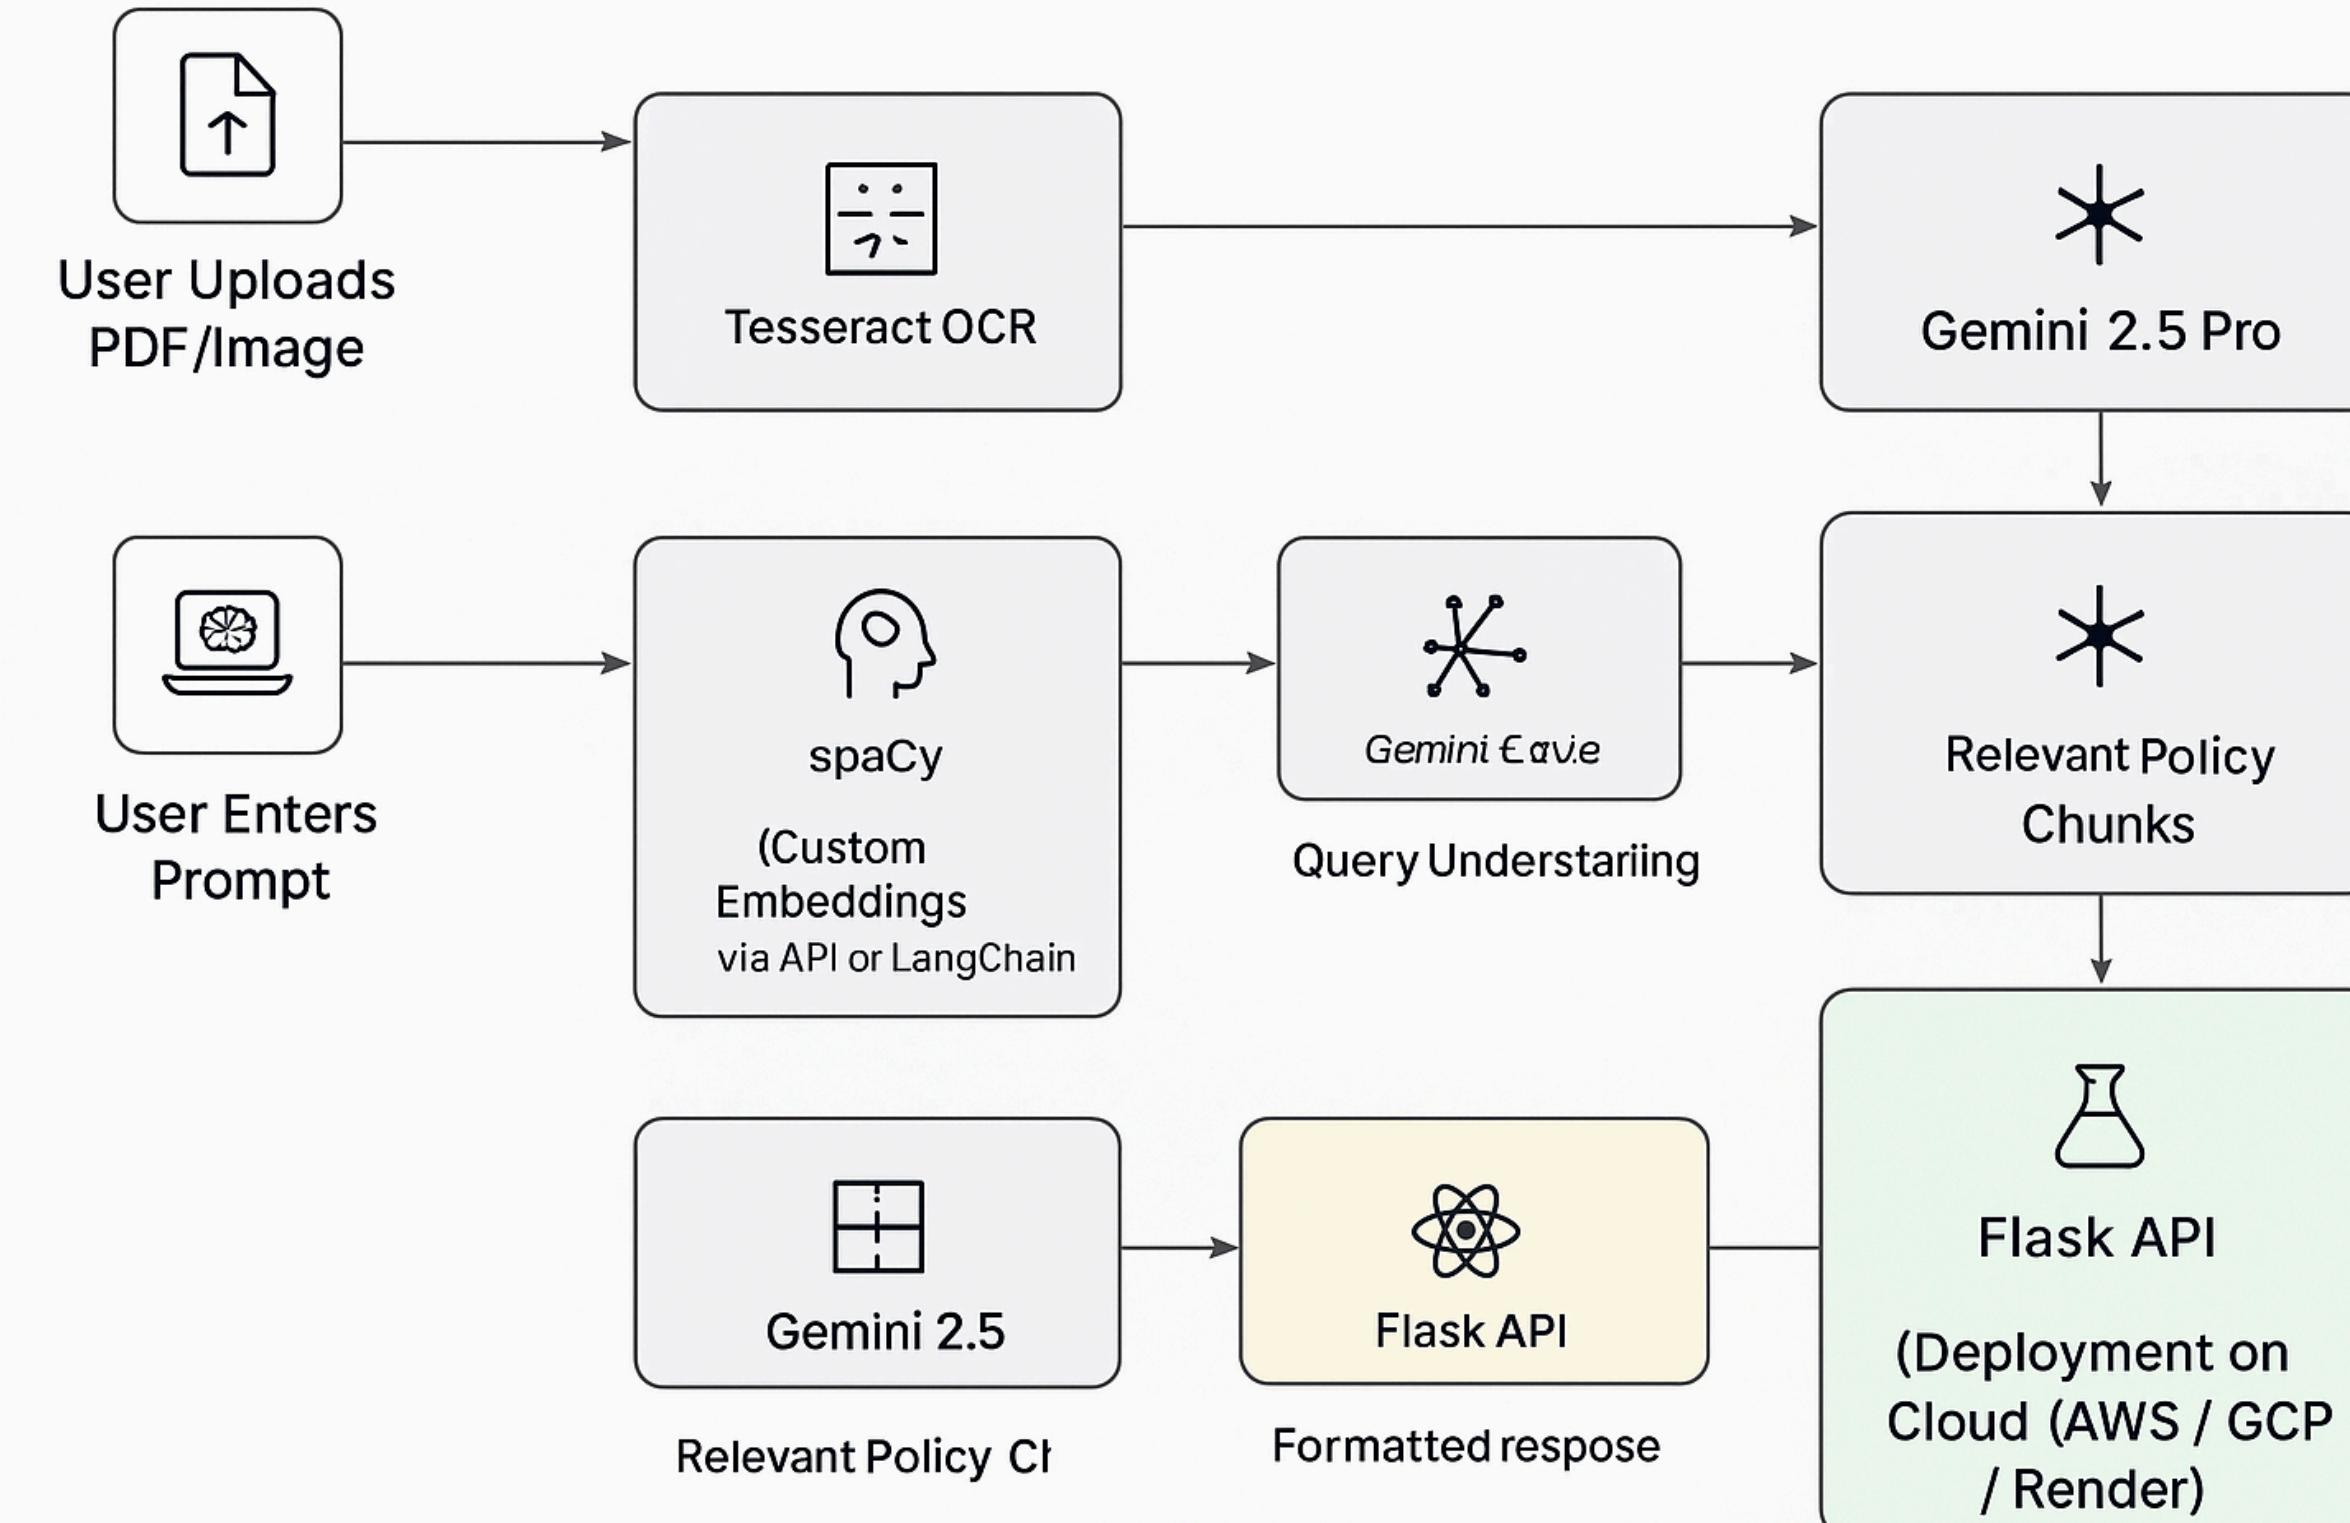

Easy Access - Anyone can read their rights

Fair for Everyone – No hidden or conflicting clauses

Accountable Systems

- **Stronger compliance & trust**

FEASIBILITY

There's strong need for automation in understanding insurance documents, companies find it hard to check documents manually.

The output (reports) can be easily used with existing systems, so it's ready for real-world use.

It can grow from small-scale use to big companies, which makes it a good option for a future scalable SaaS product.

Revenue Model

What-If Analysis & Conflict Resolution tools for underwriters.

Compliance & Audit Reports

reports sold quarterly to insurers for mandatory regulatory checks.

Future Scope

- The system can be expanded to support legal contracts, loan agreements, and government policies.
- Multilingual support can make it accessible across regions and user types.
- With real-time regulatory updates, it can become a reliable compliance monitoring tool.
